# Oilseeds: World Markets and Trade

## Soybean Oil and Palm Oil Account For An Increasing Share of World Vegetable Oil Consumption

### Percent Share of World Consumption

The combined consumption of soybean oil and palm oil, as a share of vegetable oil consumption, continues to grow and is forecast to exceed 60 percent in 2002/03, up from 54 percent in 1998/99. This comes as the consumption of sunflowerseed oil and rapeseed oil declined, from a 25 percent share of world consumption in 1998/99 to a forecast 21 percent share in 2002/03. Much of the change in consumption reflects changes in world production patterns. As the output of high oil yielding oilseeds such as rapeseed and sunflowerseed have declined, the relatively lower oil yielding soybeans are being crushed to supply similar quantities of oil. Drought conditions in Canada and Australia have caused lower softseed production while Argentina has shifted some production from sunflowerseed into soybean production. During the past five years, world consumption of vegetable oils has grown by 19 percent, increasing from 78.4 million MT in 1998/99 to a forecast total of 93.0 million MT in 2002/03. Several countries have posted even greater growth rates in consumption over this period (Russia--40 percent, and China 28 percent) while the U.S. and EU (9.3 and 15.5 percent, respectively) also show healthy consumption patterns.

## **Situation and Outlook**

Global oilseed exports for 2002/03 are projected at a record 72.7 million tons, up 630,000 tons over last month's estimate due to an increase in U.S. soybean exports as well as minor increases in exports of U.S. cottonseed and Eastern European sunflowerseed. Global trade of protein meal is up slightly from last month's estimate, with minor increases in soybean meal, sunflowerseed meal, and fish meal offsetting a slight decrease in cottonseed meal. Likewise, the estimate for 2002/03 global vegetable oil trade increased slightly this month due mainly to a 109,000-ton increase in projected soybean oil exports by Argentina.

Total U.S. oilseed production for 2002/03 is estimated at 83.5 million tons, up from last month's estimate due to an increase in soybean production of 1.1 million tons tons. Despite the increase in U.S. soybean production, U.S. soybean crush prospects are lowered 136,000 tons this month due to reduced prospects for soybean meal exports and domestic consumption. U.S. soybean meal exports are projected at 5.4 million tons, down 182,000 tons from last month's estimate. The estimate for U.S. soybean oil exports remains the same this month.

Other major changes this month include a 820,000-ton increase in U.S. soybean exports and an increase in Chinese soybean imports of 500,000 tons due to China's rapid pace of soybean imports so far this marketing year. Argentina's soybean crush estimate increased this month to a record 23 million tons due to an increase in soybean production. Correspondingly, Argentina's soybean meal and oil exports increased this month as well.

The estimate for global oilseed ending stocks increased this month to 33.8 million tons, a result of increasing soybean stocks in the U.S., Brazil, and Argentina. The global stocks estimates for protein meal and vegetable oil also increased slightly this month due to increases in those same three countries.

The U.S. season-average price for soybeans is projected at \$5.10 to \$5.80 per bushel, and the soybean meal price remained unchanged \$160 to \$180 per short ton. The U.S. soybean oil price is raised slightly to 20.5 to 23.0 cents per pound.
