## COMENTARIO DE LA CAMPAÑA ALGODONERA

Finalizaron las tareas de siembra, a nivel país, correspondientes a la campaña algodонера 2021/22 con 508.247 ha para este ciclo agrícola.

La única provincia que restaba culminar su siembra era **Salta** que destinó al cultivo 12.200 ha. Por la falta de humedad en los lotes de secano los trabajos se ralentizaron; en tanto que en los cuadros de riego más adelantados comienzan a entrar en floración. En estos casos, la mayoría se presentan en estados vegetativos con buena condición. Algunos lotes se han reportado afectados por deriva de herbicidas.

La provincia del **Chaco** con sus 220.400 ha sembradas, presenta en el ámbito de la delegación Roque Sáenz Peña un desarrollo que se encuentra fenológicamente en etapas de crecimiento vegetativo a plena floración y comienzo de formación de cápsulas en aquellos lotes más adelantados, en general con buenas condiciones y buen estado; mientras que en la delegación Charata, el cultivo se encuentra transitando las primeras

etapas reproductivas desde pimpollado a formación de las primeras cápsulas. La falta de precipitaciones, sumado a las altas temperaturas favorecen el desarrollo de plagas como pulgones y daños visibles con manchones en algunos lotes.

Asimismo, podemos mencionar que, en la provincia de **Santiago del Estero**, la siembra alcanzó las 209.400 ha. En la zona de la delegación Quimilí (se estima un aumento de la superficie de un 10 a 20% respecto de la campaña anterior) el cultivo presenta un desarrollo bueno, aunque una nueva semana con altas temperaturas y escasez hídrica comienzan a hacer visibles síntomas de afección por esta situación climática.

Por su parte, resaltar que la provincia de **Santa Fe** destinó al cultivo 50.200 ha sembradas. En la delegación Avellaneda el cultivo evoluciona en condiciones muy variables. Fenológicamente la mayoría de los lotes se encuentra en floración y llenado de bocha. La sequía está afectando algunas zonas, provocando aborto de flores y pérdida de bochas; mientras que en otras parcelas donde se han registrado precipitaciones el cultivo manifiesta signos de recuperación.

Fuente: Dirección de Estimaciones Agrícolas. Datos provisorios, sujetos a modificación y reajuste.

- Válido para áreas no anegables.  
Probabilidad (%) de tener reservas menores a las actuales
- < 5 Extremadamente más seco que lo habitual.
  - 5-20 Mucho más seco que lo habitual.
  - 20- 40 Más seco que lo habitual.
  - 40- 60 Aproximadamente normal para la época.
  - 60- 80 Más húmedo que lo habitual.
  - 80-95 Mucho más húmedo que lo habitual.
  - 95 > Extremadamente más húmedo que lo habitual
